

Bankers Systems
ARTA Deposit
Moving from Network Small Implementation
to Network Large Implementation

Step 1: Make a copy of the existing ARTA Deposit database

1. Navigate to the ARTADeposit\Util folder and run **RegisterAD.exe**
2. Select the option to **Attach/Detach Database** and click **OK**
3. Verify that the **Detach ARTA Deposit database** option is selected
4. Type in the password for the “sa” account and click **OK**. This will detach the MDF and LDF files from MSDE.
5. Click **Cancel** to close this utility
6. Navigate to the ARTADeposit\Database folder and **copy** the ARTADepositX_X.mdf and ARTADepositX_X_Log.ldf files (where X_X represents the version of ARTA Deposit installed) to another location.
7. Navigate back to the ARTADeposit\Util folder and run **RegisterAD.exe**
8. Select the option to **Attach/Detach Database** and click **OK**
9. Select the **Attach ARTA Deposit database** option
10. Type in the password for the “sa” account and click **OK**. This will re-attach the MDF and LDF files
11. Click **Cancel** to close this utility

Step 2: Remove the current implementation of ARTA Deposit

1. From the Start Menu, select **Settings** → **Control Panel** → **Add or Remove Programs**
2. Select **ARTA Deposit** and click **Change/Remove** (When prompted, select Yes to remove the database as you should already have a backup from Step 1 above.)
3. Within Add or Remove programs, select **Microsoft SQL Server Desktop Engine (ARTA Deposit)** and click **Remove**
4. Restart the computer

Step 3: Install the new implementation of ARTA Deposit

1. Install the same version of ARTA Deposit that was removed in Step 2 by following the Installation Instructions. These instructions are available in the ReadMe folder on the CD or from our Software Support web site at: <http://support.bankerssystems.com>
2. When installing ARTA Deposit on the application server, make sure to select the appropriate implementation option of **Network – Large Implementation Server (SQL Server)**

Step 4: Restoring the copied ARTA Deposit database

1. From the Start Menu, select **Programs → Microsoft SQL Server → Enterprise Manager**
2. Navigate to the **ARTADepositX_X** database
3. Right-click on the **ARTADepositX_X** database and select **All Tasks → Detach Database...**
4. Minimize Enterprise Manager
5. Navigate to where you copied the ARTADepositX_X files (from Step 1 above) and copy these files to the applicable DATA folder for SQL Server. You must overwrite the blank database files that were created during the new install of ARTA Deposit (in Step 3 above)
6. Open Enterprise Manager
7. Right-click on the Databases folder and select **All Tasks → Attach Database...**
8. Navigate to the location of the ARTA Deposit database files and select the **ARTADepositX_X.mdf** file and click **OK**
9. Click OK on the preceding screens to return to Enterprise Manager.
10. Close Enterprise Manager and test the ARTA Deposit program.
