

Rembrandt Lending System Before You Begin: Important Considerations for Stand-alone Installations

Review before installing the software:

- Wolters Kluwer Financial Services will post information and hot fixes for the Rembrandt Lending System on our Support website. Please check our Software Support web site at: <http://support.bankerssystems.com> periodically for important information regarding your version of the Rembrandt Lending System software.
- Windows operating system performance will dictate your Rembrandt software performance. If your operating system is not functioning normally, neither will Rembrandt.
- Watch available drive space. You must plan your installation to allow for future expansion and updates.
- Internet Explorer must be configured prior to installing Rembrandt. Typically, this would mean you must be able to get to the ADDRESS line after opening Internet Explorer. Rembrandt does not require Internet access; however it does require Internet Explorer is installed and ready to interpret HTML for compilation of the Rembrandt Lending System dynamic forms.
- Apply all service packs according to directions given by Microsoft. If, for example you intend to install a service pack to Windows or MSDE, please ensure you are using the appropriate service pack for the software installed onto your server. Because some service packs cannot easily be uninstalled (MSDE, MDAC, etc) it is in your best interest to fully understand the environment in which Microsoft intends the service pack be installed, as well as the changes this service pack will make to your system.
